ABOUT ME

I am an Android Developer with backend skills. I work with Android Studio and use modern patterns like MVVM. I also use tools like Room database, Firebase (Auth, Firestore, Storage), Navigation Component, and Retrofit to build user-friendly apps. Besides mobile development, I have foundational knowledge of backend development using Java and Spring Boot. I am familiar with building RESTful services and working with databases to connect my apps with servers. Additionally, I use tools like Git, Firebase, and SQLite for data management and version control. I am hardworking, responsible, and eager to continuously improve and learn new technologies.

WORK EXPERIENCE

Cypoint Bilişim Teknolojileri A.Ş.

Intern

26.08.2024 - 24.09.2024

Boğaziçi Savunma Teknolojileri A.Ş.

Intern
